

Helena Qin
Group 11
Group Assessment

1. The content that I wrote was for the first two heuristics - visibility and match.
2. I did not create any graphics, but did have screenshots in my notes. The screenshot that I took for the site was the home page on the visibility page. This was because we wanted to keep the text on the screenshots consistent, and my laptop did not have the font that the rest of my group members used.
3. I wrote the code for the general template we were using for each of the heuristic pages in addition to the layout and home page. I also wrote the css files and added lightbox to our images.
4. I was also the main organizer for our meeting and started our Google doc of notes. I also setup our git repository.
5. I think we all contributed pretty equally to the project and were willing to help each other out, but I think I did do a little more work than the other members of my group.
